

Fire Station No. 1 construction nears completion

The reconstruction of Fire Station No. 1 reached another major milestone.

The new station is in the final stages of construction with the installation of architectural finishes and site landscaping.

Cabinetry, carpeting, tiling and exterior finishes are putting the final touches on the beautiful new building.

As Public Services prepares to commission the building for occupancy, the station's emergency generator is ready for testing and the associated 2,000-gallon fuel tank has been filled with diesel fuel.

This milestone will commence the start-up and testing of various mechanical, electrical, and plumbing systems in preparation for certification as a Gold level energy efficient building and occupancy for fire crews.
