

Ketchum Libolt Park gets new lighting upgrades

Public Services Maintenance staff recently completed upgrades to the lighting at Ketchum Libolt Park.

The existing high pressure sodium lights were inefficient and did not provide a sufficient amount of light.

Rear portions of the park are lit dimly at night. Staff replaced the inefficient lights with high efficiency, brighter LED lights. The rear of the park now has a quad multi-directional light mount, which can illuminate several areas of the park simultaneously. Staff also painted the light posts for an overall aesthetic improvement to the park.
